This product is unique. Stylecrete Concrete is a blend of natural products, making each product individual and unique and will not necessarily mirror samples provided.

Premix Concrete, as a concrete supplier takes no responsibility for the following:

- Iron staining, colour change, inconsistency with aggregate colour and foreign materials. Aggregates are a natural product and therefore aesthetic and chemical consistency of this material cannot be guaranteed.
- Aesthetic suitability of the mix and the structural integrity of the mix, if water or chemicals are added to the mix on site, at the request of the concreter or pump operator or any other agent representing the owner of the property.
- Aesthetic suitability of the mix and the structural integrity of the mix if the concrete is not cured in accordance with applicable Australian Standards.
- Inappropriate / poor standards of workmanship by the concreter placers or polishers.

We advise that all concrete shrinks as it hardens and this can result in cracking. In order to minimize the amount and severity of cracking in floor slabs, it is advised that you contact your structural engineer, so that they are able to assess and take into account soil conditions, slab design thickness, reinforcement and jointing details to ensure the design reflects the expected outcome. Extra care should be taken on windy and high temperature days.

Product images and samples are an indication only and can vary in colour, shape, texture and should only be used as a guide. Premix Concrete reserves the right to alter, remove or replace these products without giving notice.
